

American Academy of Stem Cell Physicians

**AASCP Zoom Lecture June 16<sup>th</sup>, 7:30pm (EST)**

**Jerry Tennant, M.D., "Healing is Voltage: Scalar Energy, the Essence of Life"**

Dr. Jerry Tennant is a graduate of UT Southwestern Medical School. He trained as an ophthalmologist and is also broad certified in Ophthalmic Plastic Surgery. He was instrumental in bringing intraocular lenses into use in the US, opened the first surgicenter in Texas and was chairman of the ad hoc committee that wrote the rules for outpatient surgery in Texas. He performed the majority of cases that allows the FDA to approve LASIK surgery in the US. In doing so, he developed encephalitis and spent seven years in bed. When traditional medicine had nothing to offer him, he began to look at other options about getting well and eventually mapped out the electronic power grid and battery packs for the human. He discovered that all chronic disease is characterized by reversing the polarity of the battery packs that supply the voltage to allow cells to function normally and to make new cells for repair.

**He discovered that only scalar energy will restore the polarity, so cells have the necessary voltage to make new cells and thus effect healing.** He will discuss the frugality of inserting stem cells (which are cells) into an area with low voltage, low oxygen, and increased toxins and how to restore the environment before stem cells therapy. If time permits, he will also discuss that the switch that the body uses to create and activate its own stem cells is voltage and its polarity
